Project Design Phase-II Technology Architecture

Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per the table 1 & table 2

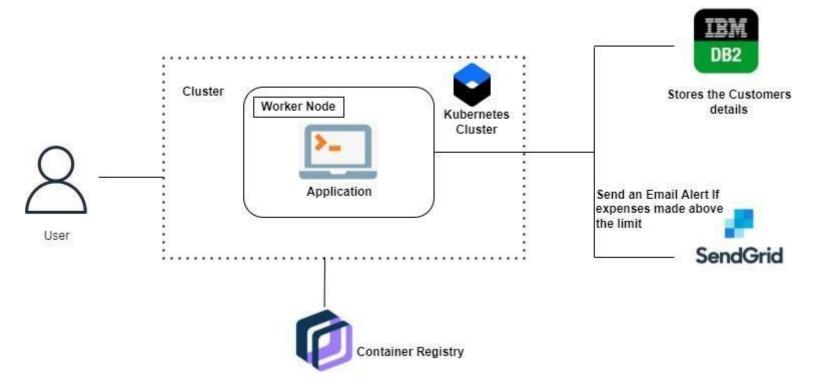

Table-1: Components & Technologies:

S.No.	Component	Description	Technology
1.	User Interface	The user can Interact with the	HTML, CSS, JavaScript,
		application with use of	Bootstrap.
		Chatbot	
2.	Application Logic-1	The application contains the sign	Python-Flask
		in/sign up where the user will login	
		into the main dashboard	
3.	Application Logic-2	Dashboard contains the fields like	Python-Flask, Bootstrap,
		Add income, Add Expenses,	Javascript
		Save Money	
4.	Application Logic-3	The user will get the expense report in the graph form and	Chart.js, SendGrid
		also get alerts if the expense limit	
		exceeds	

5.	Database	The Income and Expense data are	MySQL.
		stored in the MySQL database	
6.	Cloud Database	With use of Database Service on	IBM DB2, IBM Cloudant
		Cloud, the User data are stored in	etc.
		a well secured Manner	
7.	File Storage	IBM Block Storage used to store	IBM Block Storage or Other
		the Financial data of the user	Storage Service or Local
			Filesystem.

Table-2: Application Characteristics:

S.No.	Characteristics	Description	Technology
1.	Open-Source Frameworks	Flask Framework in Python is used to implement this Application	Python-Flask
2.	Security Implementations	This Application Provides high security to the user Financial data. It can be done by using the Container Registry in IBM cloud	Container Registry, Kubernetes Cluster
3.	Scalable Architecture	Expense Tracker is a life time access supplication. It's demand will increase when the user's income are high	Container Registry, Kubernetes Cluster
4.	Availability	This application will be available to the user at any part of time	Container Registry, Kubernetes Cluster
5.	Performance	The performance will be high because there will be no network traffics in the application	Kubernetes Cluster
